Iran's National Climate Change Strategy Program:

The program of Iran's National Climate Change Strategy to reduce emissions and resilience against climate change in the country in 2016 was compiled and approved by the Environmental Organization's Climate Change Office and the country's National Climate Change Working Group and includes the following five sections:

Reduction of greenhouse gas emissions,

Water resources management department,

Department of Agriculture and Food Security,

Department of biological resources

Health department,

The goals of this program are:

Creating the necessary infrastructure in order to implement the obligations of the climate change convention,

Kyoto Protocol, Paris Agreement and future approvals thereunder

Implementation of emission reduction obligations

Creating monitoring infrastructure

Reporting under the desired goals of national participation.
